

# audition et médecine, 1er verrou: dépister

# audition et médecine, 2e verrou: appareiller

Have been designed for the convenience of those suffering from deafness who hunt or follow other out-door sports, and for Members of Parliament. The upper part of the inside of the hat contains two acoustic trumpets, with their collecting orifices as shown. They are so arranged that the tapered ends come through the brim and enter the ears, where they are kept in size by concealed springs; and as the sound-collectors are hidden by the material of the hat, they are not noticeable on the outside surface. For ladies, their felt hats have arranged in the interior an acoustic instrument communicating with one or both ears by means of a thin elastic tube covered with black or coloured silk. It is useful for the lecture-room, churches, concerts, public meetings, or visiting ... .. from 25 £ 0
